01 — LOGO & MEANING

The urbs brand

A symbol that connects business and engineering to turn scattered data into decisions with impact.

THE SYMBOL

The isotype is born from the idea of a **lighthouse** —a clear guide amid the noise of data— and evolves into an open, diagonal form. Its two pieces represent **business** and **engineering**; the diagonal that connects them is the **flow of information** that unites them. A symbol of guidance, progress and collaboration.

THE NAME

«Urbs» is the Latin word for **city**: infrastructure, interconnected systems and order over complexity. Urbs Data is the infrastructure that organizes a company's scattered data. The logotype is always written in lowercase, **urbs**, in the Syne typeface.

LOGOTYPE CONSTRUCTION

Horizontal lockup — isotype + «urbs» logotype in Syne.
Primary use in header, footer and communications.

Clear space — keep a minimum margin equal to the isotype height around the lockup.

✓ Do

- Use the primary purple or the flat black/white logo.
- Keep the original proportion between isotype and logotype.
- Respect the clear space and a minimum legible size (16px isotype).

✗ Don't

- Rotate, distort or alter the isotype's proportions.
- Write «Urbs» with an initial capital or change the Syne typeface.
- Place the logo on low-contrast or noisy backgrounds.

02 — LOGO USAGE

How to use the logo

The isotype and lockup adapt to different backgrounds and formats. These are the approved uses in light and dark mode.

ISOTYPE (ICON ONLY)

ISOTYPE + LOGOTYPE (HORIZONTAL LOCKUP)

VERTICAL LOCKUP & MONOCHROME

General rule. Always choose the version with the most contrast against the background. On light backgrounds, primary purple or ink; on dark backgrounds, intensified isotype or white; on the brand purple or photos, the white version. Never combine the isotype from one mode with the text from another.

03 — MISUSE

What to avoid

The logo loses strength and coherence when altered. These are the most common mistakes that must never be made in any application.

When in doubt, don't modify. Always use the original isotype or lockup, without transforming, recoloring or replacing the typeface. If a background hurts legibility, switch versions (color, ink or white) rather than forcing the logo.

04 — COLOR SYSTEM

Palette

A deep purple as the proprietary color, paired with cool neutrals and a data scale derived from the brand purple.

PRIMARY & BRAND COLOR

 Primary purple #6E4DAB Proprietary color - buttons, links and accents	 Lilac #AA95DE Highlight, hover and emphasis on dark backgrounds	 Soft lilac #F0EDFA Soft backgrounds and labels	 Deep purple #372559 Text and detail on soft lilac
---	---	---	---

NEUTRALS (LIGHT MODE)

 Background #FCFCFD Interface base	 Ink #1C2024 Primary text	 Faint ink #60646C Secondary text	 Border #D9D9E0 Lines and dividers
--	---	--	--

DATA SCALE (VISUALIZATIONS)

 Data 1 #6E4DAB	 Data 2 #AA95DE	 Data 3 #C0B1E9	 Data 4 #D2C6F3	 Data 5 #DED5F9
--	--	--	---	--

SEMANTIC / FEEDBACK

 Success #2B9A66	 Warning #FFC53D	 Info #0588F0	 Error #E5484D
---	---	---	---

Accessible by design. The palette is built on **Radix Colors** practices: scales designed to meet accessibility contrast levels (WCAG) in every text-and-background combination. Each color has a defined role within a consistent scale—from soft backgrounds to solid accents—ensuring legibility in both light and dark mode, and a safe contrast ratio between text and surface.

05 — LIGHT & DARK MODE

Two modes, one identity

The brand works in light and dark. The primary purple stays constant; on dark backgrounds, the logo and small text in the primary color increase their brightness by 50% to preserve contrast and legibility.

EQUIVALENT COLORS PER MODE

Light	
Background	#FCFCFD
Primary text	#1C2024
Surface / card	#FFFFFF
Secondary text	#60646C
Border	#D9D9E0
Primary purple	#6E4DAB

Dark	
Background	#111113
Primary text	#EDEF0
Surface / card	#19191B
Secondary text	#B2B3BE
Border	#393A40
Intensified purple	#A574FF

Intensified purple on dark. The primary purple #6E4DAB is correct on light backgrounds, but loses presence on black. So, in dark mode, this adjustment applies **only to the logo and small text in the primary color** (links, labels, icons), shown with brightness increased by **50%**, resulting in **#A574FF**. Solid fills and buttons keep the original primary purple. This way the color «breathes» and keeps contrast without changing the identity.

Square corners. The brand uses no rounded corners: every element keeps right angles, reinforcing Urbs Data's technical, engineering character.

06 — TYPOGRAPHY

Four families, clear roles

Each family serves a specific function: identity, headings, body and technical data.

Syne

LOGOTYPE

urbs

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklm 0123456789

Instrument Sans

HEADINGS

Data into decisions

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklm 0123456789

BODY / UI

Interface text and paragraphs

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklm 0123456789

Pitagon Sans Mono

DATA / CODE / KICKERS

const data = urbs;

ABCDEFGH abcdefg 0123456789 {}[]()</>

Syne

Exclusive to the «urbs» logotype. Not for body text.

Instrument Sans

Titles and headings. Weight 600, negative tracking.

IBM Plex Sans

Body, navigation and UI. Weight 400–500.

07 — VOICE & APPLICATION

How the brand sounds and is applied

Urbs Data speaks clearly, without unnecessary jargon. It translates the technical into business value.

TONE OF VOICE

- Clear and direct — «no unnecessary jargon».
- Results-oriented — data → decisions.
- Approachable and reliable — reply within 24 h, no commitment.
- Technical yet accessible — explains ETL, BigQuery, dbt in plain language.

KEY MESSAGES

«We turn your data into decisions and automated processes.»

Data engineering · Artificial Intelligence · Automation ·
App development · Business Intelligence. A single
source of truth for the whole company.
